## AZURE SITE RECOVERY accelerates your BCDR strategy

### Lighstream – Solutions Innovator

Lighstream is a Microsoft® Gold Cloud Platform Partner, and combines data networking and systems integration expertise with an extensive cloud practice to create a world-class provider of technology solutions. Lighstream integrates multiple solutions from best-in-class providers into a single, seamless solution with a single point of contact backed by fanatical customer service.

### About Azure Site Recovery

Site Recovery is an Azure service that simplifies your BCDR strategy through a comprehensive orchestrated replication solution from your on-premises physical servers and virtual machines to the cloud (Azure) or to a secondary datacenter. When outages occur in your primary location, Site Recovery provides a seamless approach to fail over your apps and workloads to the secondary location with the ability to fail back as effortlessly as well.

### Benefits of AZURE SITE RECOVERY

Azure Site Recovery accelerates your BCDR strategy making it easier to manage replication, failover and recovery of multiple business workloads and apps from a single location. Site Recovery allows you to replicate workloads running on Hyper-V virtual machines, VMware virtual machines, and Windows/Linux physical servers.

**Azure Site Recovery** is available through Lightstream, a Microsoft® Gold Platform Cloud Partner and expert solutions innovator.
