

## A reliable carrier-cloud interconnect is within reach

Stable and secure connections between network carriers and cloud providers don't have to be so difficult. Lightstream's Cloud Interconnect provides a reliable connection between your network carriers and cloud providers to keep your business running smoothly 24x7.

Our team of cloud architects understands the complexities of connecting sites, mobile devices, vehicles and IoT technologies to cloud providers like AWS & Azure. In fact, top network carriers and cloud providers such as Amazon and Microsoft look to Lightstream to manage the complex interconnections between network providers and the cloud data centers – giving you one less thing to worry about.

**Fully Integrated Global Capabilities:** Lightstream makes ordering AWS Direct Connect or Azure ExpressRoute simple and straightforward from a network of global service providers reaching 198 countries.

**Network Design & Assessment:** Lightstream understands global networking and the complex rules of connectivity within a cloud data center. Our engineers are expert at properly implementing the end-to-end logical connectivity, meet point assignments, BGP routing, circuit definitions, VNet/Subnet architecture, and failover designations.

**Private, Hybrid-, Multi-Cloud, IoT Devices:** Lightstream has a comprehensive portfolio of connectivity solutions for all types of cloud implementations and connectivity needs. Our solutions can be deployed standalone or as a portion of a multi-cloud environment.

**Management and Monitoring:** Lightstream can provide fully managed and monitored interconnection solutions to AWS & Azure, regardless of interconnection type.
